

Sustainability That Works

Fríant designs furniture to work harder for clients and the planet. Our products are lasting longer, adapting faster, and reducing what ends up in the waste stream.

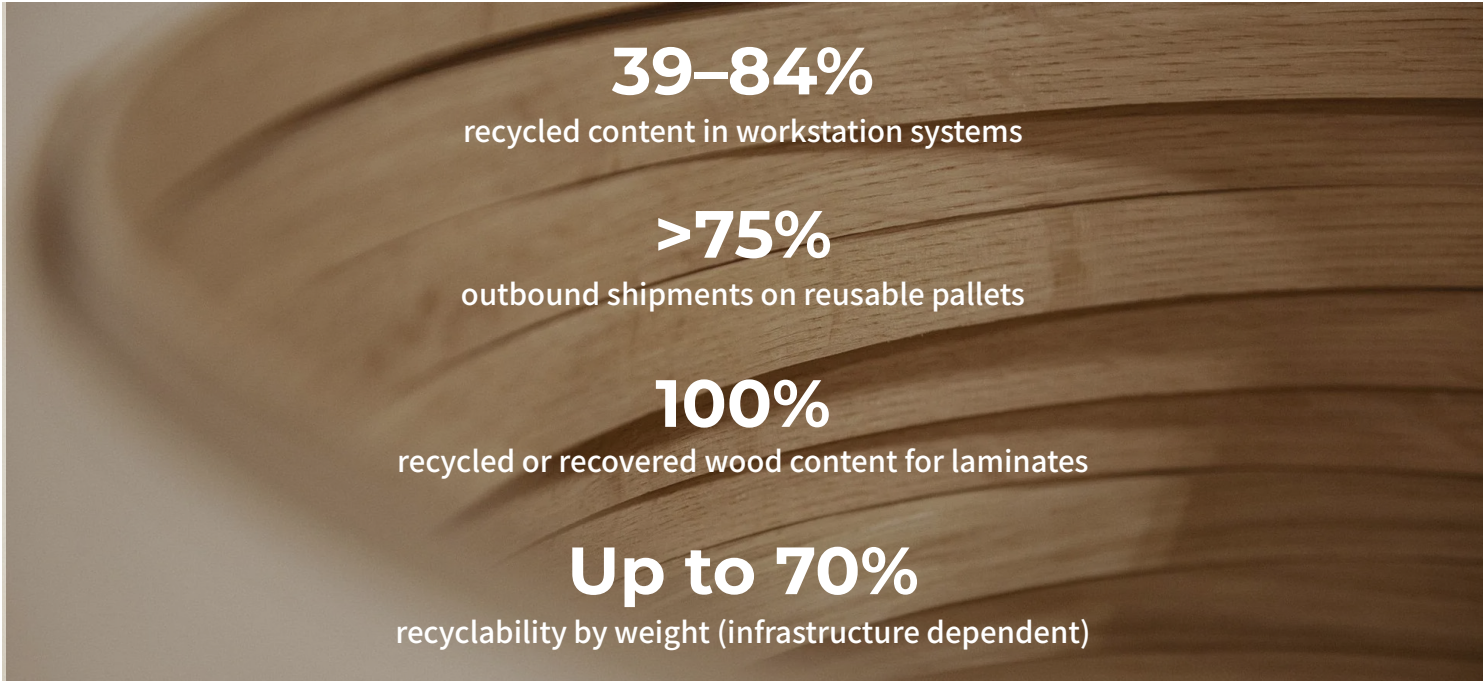

With durable materials and modular systems, our products minimize replacements, lower costs, and shrink the environmental footprint of each project. This includes laminate panels made with 85% wood raw materials and 100% recycled or recovered wood content. And because we manufacture on both coasts, with plants in California and Virginia, clients get dependable lead times, while shorter shipping routes reduce long-haul emissions.

The impact is measurable: workstation platforms contain 39–84% recycled content and can be up to 70% recyclable by weight at end of life. More than 75% of shipments already travel on reusable pallets, keeping packaging out of landfills and resources in use longer.

Why It Matters:

Products that adapt quickly and last longer.
Workplaces with cleaner air and safer materials.
Sustainability that reduces waste at every stage.
Practical support for green building goals.

39–84%

recycled content in workstation systems

>75%

outbound shipments on reusable pallets

100%

recycled or recovered wood content for laminates

Up to 70%

recyclability by weight (infrastructure dependent)

Performance Meets Responsibility

We use materials that balance performance, design, and responsibility. Fabrics include options with up to 100% recycled polyester, and our COM program supports biobased or compostable fibers. Composite wood meets strict emissions standards, with FSC-certified or renewable woods available on request. For surfaces, we also offer PVC-free edge banding where it fits both design and durability needs.

Backed by Green Building Standards

Cleaner air makes for better workplaces. All Fríant systems are MAS Certified Green for low emissions and finished with waterborne low-VOC coatings, reducing exposure to harmful chemicals. Our composite wood is TSCA Title VI compliant, and products can contribute to LEED v4 MR and EQ credits, giving clients a straightforward path toward green building goals. Also, most of our ergonomic chairs are GREENGUARD guaranteed.

Logistics with Less Waste

More than 75% of outbound shipments already use reusable wood pallets with recyclable stretch wrap, cutting waste before products even arrive on site. We're also reviewing corrugated, EPS, and plastic packaging to find better recovery and reduction opportunities. Our laminate panels also help reduce waste because they are made with recycled wood content.

For Workplaces That Do More

At Fríant, sustainability is designed to work in practice, not just on paper. Our products reconfigure quickly, last longer, and support green building goals. The result: workplaces that are adaptable, durable, and responsibly built.
